

ACCUMULATION SET FOR FIREPLACE STOVES (AKKUM 04)

Fireplace stoves can be complemented by special shaped heat accumulation blocks ROMOTOP. These blocks are inserted into the space above the combustion chamber, the hottest place of the device. During the burning process, heat will be accumulated and, at the same time, released into the surroundings. Radiation of heat can continue up to 5 hours after the flame has extinguished. Hence, the fireplace stove with heat accumulation can transmit heat into its surrounding gradually, thus increasing user's comfort and making the heating process more pleasant. This set contains 10 heat accumulation blocks. Total weight of the AKKUM 04 set is 38 kg.

- special material for heat energy accumulation
- accessories approved by the manufacturer
