

SIENA N Tiled stoves

The SIENA N fireplace stoves are designed as an all-tile stove which means that the ceramic tiles are the main material that sets its clear design direction and functionality. It stands out in a wide range of classic interiors, whether in houses or cottages. The elegantly rounded shapes and overall dimensional balance give these stoves a distinctive style. There is a choice of three shades of glossy glazes - the most desirable for this type of stove.

This tiled stove is also suitable for low-energy homes. Thanks to the external air intake (EAI) to the combustion chamber, no interior air is consumed. The design of the stove allows optional flue connection both ways, top or rear. The door glass is washed on the inside with the secondary air intake and thus prevents the cumulation of soot. The combustion chamber is lined with chamotte brick tiles. The regulation of the primary and secondary air intake is controlled by a single control element.
