

TOP ROMOTOP MAMMOTH ACCUMULATION SET (AKKUM SOL 02)

Design fireplaces can be complemented by special shaped heat accumulation blocks ROMOTOP. These blocks are inserted into the space above the combustion chamber, the hottest place of the device. During the burning process, heat will be accumulated and, at the same time, released into the surroundings. The radiation of heat can last for several hours after the flame has extinguished. Hence, the design fireplaces with heat accumulation can transmit heat into its surrounding gradually, thus increasing user's comfort and making the heating process more pleasant. This set contains 7 heat accumulation blocks. Total weight of the AKKUM SOL 02 set is 98 kg.
