

NAVIA is a fireplace stove with a large combustion chamber designed to pique the interest of everyone - not only through its appearance, but first and foremost thanks to its excellent combustion.

NAVIA Fireplace stoves

A sensitive fusion of all the major NAVIA fireplace stove dimensions has resulted in a unique design. The rounded and unique dimensions of the glass provide a large area for direct observation of the flames.

This fireplace stove is suitable for low-energy homes. An EAI (External Air Intake) system is included. The standard version includes the option to connect an upper or rear flue gas exhaust. Thanks to the secondary air intake, the door glass is air-washed to prevent the cumulation of soot. The combustion chamber is lined with chamotte brick tiles. The primary and secondary air intakes are regulated by a single control element. The lower part of the stove includes a storage area with a door for storing a small amount of wood or tools.
