

ESQUINA 3G Fireplace stoves

The compact square-shaped fireplace stove model with its high corner glass door catches the eye with its unique view of the fire from all angles.

The ESQUINA 3G fireplace stove is suitable for low-energy homes. An EAI (External Air Intake) system is included. The ventilated designer handle permits use when the stove is lit. The door can be locked in the open position. The standard version includes the option to connect an upper or rear flue gas exhaust. Thanks to the secondary air intake, the door glass is air-washed to prevent the cumulation of soot. The combustion chamber is lined with white MATRIX chamotte brick. The primary and secondary air intakes are regulated by a single control element.
